AMIT KUMAR

- Our HOME2YOU is a low investment startup because at the end of the day we don't produce any product, we just give a platform to already produced products.
- Our project is also small, so the upfront investment is not that big and we would like to minimise it as much as possible.
- We will fund more than 80% by ourselves, i.e. 80 lakhs rupees, we are 5 members, each will contribute 16 lakhs.
- We'll be raising remaining 20%, i.e. 20 lakhs from the investors for an equity dilution of ~~20%~~ 10%, we'll give return based on our balance sheet.
- As we are doing the upfront investment we will try to maintain and spend as less as possible, example, working in a friend's space or work from home etc.
- Our delivery partners are given commission on starting, as the startup picks up ~~with~~ we'll give them permanent job.

- We'll be asking our delivery partners to use public transport because it'll be the cheapest option.
- We'll be delivering in dabbas, at a constant interval of time in fixed slots rather than an entire day, this will help save money.
- ~~So~~ so our each person's equity is 10% of the company, and investors will have 10%, we'll be giving return from 7% - 10% based on balance sheet.
- If our balance sheet is good, then we can give returns 7% - 10%, otherwise we won't be able to reach our target (terms and conditions)
- Emergency fund will be setup, but used in case of emergency only.
- This is how we want to raise the money for our startup and we will spend efficiently.
